

INSPIRE FORENSICS

(Recognised by the Indian Society of Forensic Science))

CUET-PG 2026

SAMPLE PAPER

A National Level Socio-Forensic Voluntary Student Led Educational Firm

Forensic Science (SCQP13)

Q1 The Takayama test gives a positive result for the identification of:

- A. Semen stain**
- B. Saliva stain**
- C. Blood stain**
- D. Urine stain**

Q2 Section 45 of the Indian Evidence Act deals with:

- A. Dying declaration**
- B. Confession**
- C. Expert opinion**
- D. Examination of the accused**

Q3 Which part of hair lies between the cuticle and medulla?

- A. Shaft**
- B. Cortex**
- C. Root**
- D. Bulb**

Q4. Searching methods at a crime scene from the centre of a circle to its radius is known as: (PYQ 2025):

- A. Grid method**
- B. Spiral method**
- C. Zone method**
- D. Strip method**

Q5. Incised wounds are caused by:

- A. Blunt force**
- B. Sharp cutting force**
- C. Firearm**
- D. Thermal injury**

Q6. The genetic constitution responsible for ABO blood groups is called:

- A. Phenotype**
- B. Genotype**
- C. Pleiotropy**
- D. Polygenic trait**

Q7. Assertion (A): Fingerprints remain unchanged throughout a person's lifetime.

Reason (R): Fingerprint patterns are formed due to genetic and environmental factors during fetal development.

- A. Both A and R are true and R is the correct explanation of A**
- B. Both A and R are true but R is not the correct explanation of A**
- C. A is true but R is false**
- D. A is false but R is true**

Q8. Diatoms in drowning cases are most reliably detected from (PYQ 2025):

- A. Nails**
- B. Hair**
- C. Femur bone marrow**
- D. Fingertips**

Q9. Which of the following is NOT an unnatural sexual offence?

- A. Sodomy**
- B. Incest**
- C. Bestiality**
- D. Buccal coitus**

Q10. The process of reading erased or obliterated writing is known as:

- A. Detection**
- B. Effacement**
- C. Decipherment**
- D. Obliteration**

Q11. Logistic management at a crime scene includes all EXCEPT:

- A. Availability of crime scene kits**
- B. Transportation facilities**
- C. Chain of custody documentation**
- D. Scene security equipment**

Q12. Which glass fracture rule is correct? (PYQ 2020)

- A. Radial cracks form before concentric cracks**
- B. Concentric cracks form before radial cracks**
- C. Both forms simultaneously**
- D. No specific sequence**

Q13. The forensic significance of diatoms lies in determining:

- A. Cause of death**
- B. Time since death**
- C. Place of drowning**
- D. Identity of victim**

Q14. Fire burn patterns, such as V-patterns, mainly indicate:

- A. Accelerant type**
- B. Direction of fire spread**
- C. Time of ignition**
- D. Smoke density**

Q15. The law that states “every contact leaves a trace” is:

- A. Law of individuality**
- B. Law of probability**
- C. Law of exchange**
- D. Law of comparison**

Q16. The acid phosphatase test is associated with the detection of:

- A. Blood**
- B. Saliva**
- C. Semen**
- D. Urine**

Q17. In forensic photography, the scale should be placed:

- A. Above the object**
- B. Below the object**
- C. On the same plane as the object**
- D. At an angle to the object**

Q18. Which of the following is NOT a basic fingerprint pattern?

- A. Loop**
- B. Whorl**
- C. Arch**
- D. Delta**

Q19. The most reliable source of DNA in forensic cases is:

- A. Saliva**
- B. Blood**
- C. Bone marrow**
- D. Hair shaft**

Q20. Tire and skid mark patterns are MOST useful in reconstructing: (PYQ 2022)

- A. Weapon used**
- B. Victim movement**
- C. Vehicle speed and direction**
- D. Cause of death**

Q21. The confirmatory test for semen is based on the detection of:

- A. Spermatozoa**
- B. Protein**
- C. Sugar**
- D. Urea**

**Q22. Assertion (A): Loop is the most common fingerprint pattern found in humans.
Reason (R): Loop patterns are formed when ridges enter and exit from the same side of the finger.**

- (a) Both A and R are true and R is the correct explanation of A**
- (b) Both A and R are true but R is not the correct explanation of A**
- (c) A is true but R is false**
- (d) A is false but R is true**

Q23. The scientific study of handwriting is called:

- A. Calligraphy**
- B. Graphology**
- C. Paleography**
- D. Typography**

Q24. Assertion (A): Semen stains fluoresce under ultraviolet light.

Reason (R): Seminal fluid contains flavins that emit fluorescence under UV radiation.

- A. Both A and R are true and R is the correct explanation of A**
- B. Both A and R are true but R is not the correct explanation of A**
- C. A is true but R is false**
- D. A is false but R is true**

Q25. Indian Evidence Act, 1872 mainly governs: (PYQ 2021)n

- A. Police powers**
- B. Court procedures**
- C. Admissibility and relevance of evidence**
- D. Crime scene management**

Q26. Fingerprints are considered reliable for identification because they are:

- A. Changeable and hereditary**
- B. Unique and permanent**
- C. Temporary and classifiable**
- D. Variable and environmental**

Q27. Which sample gives the highest success rate for STR analysis?

- A. Hair shaft**
- B. Bone**
- C. Blood**
- D. Nail**

Q28. The term “calibre” in firearms refers to the:

- A. Length of barrel**
- B. Weight of bullet**
- C. Diameter of bore**
- D. Type of rifling**

- Q29. Assertion (A): Post-mortem lividity helps in estimating the cause of death.**
Reason (R): Lividity occurs due to the settling of blood in dependent parts of the body after death.
- A. Both A and R are true and R is the correct explanation of A**
 - B. Both A and R are true but R is not the correct explanation of A**
 - C. A is true but R is false**
 - D. A is false but R is true**

Q30. In forensic toxicology, chronic poisoning is characterised by:

- A. Sudden onset**
- B. Rapid death**
- C. Repeated exposure**
- D. High single dose**

Q31. The most widely used fingerprint classification system in India is: (PYQ 2022)

- A. Galton system**
- B. Henry's classification system**
- C. Bertillon system**
- D. Vucetich system**

Q32. Which test differentiates human blood from animal blood?

- A. Takayama test**
- B. Benzidine test**
- C. Precipitin test**
- D. Luminol test**

Q33. The branch of forensic science dealing with poisons and drugs is:

- A. Forensic pathology**
- B. Forensic chemistry**
- C. Forensic toxicology**
- D. Forensic biology**

Q34. The smallest unit of fingerprint comparison is: (PYQ 2021)

- A. Pattern**
- B. Ridge count**
- C. Minutiae**
- D. Core**

Q35. Which enzyme is responsible for joining Okazaki fragments during DNA replication?

- A. DNA polymerase I**
- B. DNA polymerase III**
- C. DNA ligase**
- D. RNA primase**

Q36. Rigor mortis refers to:

- A. Cooling of the body**
- B. Stiffening of muscles**
- C. Decomposition**
- D. Drying of tissues**

Q37. Assertion (A): DNA profiling is more reliable than blood group analysis in individual identification.

Reason (R): DNA shows a higher degree of polymorphism compared to blood group systems.

- A. Both A and R are true and R is the correct explanation of A**
- B. Both A and R are true but R is not the correct explanation of A**
- C. A is true but R is false**
- D. A is false but R is true**

Q38. Match the following:

A. Loop	1.Two Deltas
B. Whorl	2.One Delta
C. Arch	3.NO Delta
D. Composite	4.Combination Of Patterns

Options:

- A. 2-A, 1-B, 3-C, 4-D**
- B. 1-A, 2-B, 4-C, 3-D**
- C. 3-A, 1-B, 2-C, 4-D**
- D. 2-A, 3-B, 1-C, 4-D**

Q39. The molar mass of glucose ($C_6H_{12}O_6$) is approximately:

- A. 90 g/mol**
- B. 120 g/mol**
- C. 150 g/mol**
- D. 180 g/mol**

Q40. The wavelength of light is inversely proportional to it,s:

- A. Velocity**
- B. Frequency**
- C. Amplitude**
- D. Intensity**

Q41. Cyanide poisoning is identified by the smell of:

- A. Rotten eggs**
- B. Garlic**
- C. Bitter almonds**
- D. Fish**

Q42. pH of human blood normally lies between:

- A. 6.8 – 7.0**
- B. 7.0 – 7.2**
- C. 7.35 – 7.45**
- D. 7.8 – 8.0**

Q43. The zone search method is most useful for:

- A. Outdoor scenes**
- B. Large open fields**
- C. Buildings with rooms**
- D. Water bodies**

Q44. The acid phosphatase test is used for the detection of:

- A. Blood**
- B. Semen**
- C. Saliva**
- D. Urine**

Q45. Which factor is LEAST useful in determining time since death?

- A. Rigor mortis**
- B. Algor mortis**
- C. Livor mortis**
- D. Blood group**

Q46. Examination of documents using oblique lighting helps in detecting:

- A. Ink composition**
- B. Indentations**
- C. Handwriting slant**
- D. Paper quality**

Q47. The parent plant part used to prepare ganja is:

- A. Root**
- B. Stem**
- C. Leaves and flowering tops**
- D. Seeds**

Q48. The ridge characteristics used for fingerprint comparison are known as:

- A. Deltas**
- B. Whorls**
- C. Minutiae**
- D. Cores**

Q49. Match the following

A. Blood	1.Precipitation test
B. Saliva	2.Amylase Detection
C. Semen	3.PSA test
D. Hair	4.Medullary index

Options:

- A. 2-A, 1-B, 3-C, 4-D**
- B. 1-A, 2-B, 4-C, 3-D**
- C. 3-A, 1-B, 2-C, 4-D**
- D. 2-A, 3-B, 1-C, 4-D**

Q50. Which type of evidence can be classified using Henry's system?

- A. Digital evidence**
- B. Questioned documents**
- C. Fingerprints**
- D. Tool marks**

Q51. The forensic significance of diatoms lies in determining:

- A. Cause of death**
- B. Time since death**
- C. Place of drowning**
- D. Identity of victim**

Q52. Which test is used for species origin determination of blood?

- A. Kastle–Meyer test**
- B. Teichmann test**
- C. Benzidine test**
- D. Precipitin test**

Q53. Individualisation refers to:

- A. Classifying evidence into groups**
- B. Linking evidence to a single unique source**
- C. Identifying the type of material**
- D. Recognizing evidence at the scene**

Q54. Reconstruction is MOST reliable when based on: (PYQ 2022)

- A. Confession**
- B. Witness statements**
- C. Physical evidence patterns**
- D. Media reports**

Q55. Bloodstain Pattern Analysis helps to determine all EXCEPT: (PYQ 2021)

- A. Direction of force**
- B. Position of the victim**
- C. Time of death**
- D. Type of weapon**

Q56. Match the following:

- A. Francis Galton — 1. Fingerprint classification**
- B. Karl Landsteiner — 2. Blood group discovery**
- C. Mathieu Orfila — 3. Father of toxicology**
- D. Alec Jeffreys — 4. DNA fingerprinting**

Options:

- (a) A–2, B–1, C–3, D–4**
- (b) A–1, B–2, C–4, D–3**
- (c) A–3, B–1, C–2, D–4**
- (d) A–2, B–3, C–1, D–4**

Q57. Which of the following is a confirmatory test for semen?

- A. Florence test**
- B. Acid phosphatase test**
- C. Benzidine test**
- D. Kastle–Meyer test**

Q58. In firearm injuries, blackening around the wound indicates:

- A. Long-range firing**
- B. Contact shot**
- C. Close-range firing**
- D. Ricochet injury**

Q59. The Henry classification system is based on:

- A. Ridge count only**
- B. Ridge density**
- C. Pattern type and ridge tracing**
- D. Minutiae only**

Q60. A dying declaration is admissible in evidence because the maker is:

- A. Under oath**
- B. Expecting death**
- C. A medical professional**
- D. A Police officer**

Q61. Antemortem wounds show:

- A. No bleeding**
- B. Inflammation**
- C. Pale margins**
- D. Absence of clot**

Q62. Which poison affects the nervous system?

- A. Arsenic**
- B. Cyanide**
- C. Alcohol**
- D. Lead**

Q63. Homicidal death means:

- A. Natural death**
- B. Accidental death**
- C. Suicide**
- D. Death caused by another person**

Q64. Which type of asphyxia is common in hanging?

- A. Smothering**
- B. Drowning**
- C. Strangulation**
- D. Partial asphyxia**

Q65. Match the following:

- A. Natural — 1. Poisoning**
- B. Accidental — 2. Disease**
- C. Suicidal — 3. Fall from height**
- D. Homicidal — 4. Assault**

Options:

- (a) A–2, B–1, C–3, D–4**
- (b) A–1, B–2, C–4, D–3**
- (c) A–3, B–1, C–2, D–4**
- (d) A–2, B–3, C–1, D–4**

Q61. Henry's system is used for the classification of:

- A. Documents**
- B. Footprints**
- C. Fingerprints**
- D. Handwriting**

Q67. The Becke line method is used for:

- A. Glass fracture**
- B. Refractive index**
- C. Density**
- D. Hardness**

Q68. The Government of India Printing Press for banknotes is located at:

- A. Chennai**
- B. Nasik**
- C. Delhi**
- D. Kolkata**

Q69. In STR-based DNA profiling, the term heterozygous locus refers to:

- A. Presence of two identical alleles at a locus**
- B. Presence of two different alleles at a locus**
- C. Presence of multiple loci on the same chromosome**
- D. Presence of non-coding DNA only**

Q70. Which biological sample is MOST suitable for long-term DNA preservation?

- A. Saliva on envelope**
- B. Fresh blood sample**
- C. Bone or teeth**
- D. Hair without root**

Q71. The phenomenon responsible for the separation of compounds in chromatography is based on differences in:

- A. Molecular weight**
- B. Solubility and adsorption**
- C. Melting point**
- D. Refractive index**

Q72. In forensic medicine, algor mortis refers to:

- A. Cooling of the body after death**
- B. Stiffening of muscles**
- C. Discolouration of skin**
- D. Decomposition of tissues**

Q73. Which law explains the exchange of trace evidence between objects in contact?

- A. Law of probability**
- B. Law of individuality**
- C. Locard's Exchange Principle**
- D. Law of progressive change**

Q74. Match the following:

- A. Ink — 1. Thin Layer Chromatography**
- B. Handwriting — 2. Slant and spacing**
- C. Paper — 3. Fiber analysis**
- D. Signature — 4. Line quality**

Options:

- (a) A-2, B-1, C-3, D-4**
- (b) A-1, B-2, C-4, D-3**
- (c) A-3, B-1, C-2, D-4**
- (d) A-2, B-3, C-1, D-4**

Q75. In bloodstain pattern analysis, elongated stains indicate:

- A. Low impact velocity**
- B. Passive dripping**
- C. Directional force**
- D. Coagulated blood**

Disclaimer

- This sample paper is prepared by the Inspire Forensics community, a National Level Socio-Forensic Voluntary Student-Led Educational Firm, for educational purposes only.
- The questions and content are based on the collective experience of forensic science students who have successfully cleared NFAT, AIFSET, and CUET.
- While every effort has been made to ensure accuracy and relevance, this sample paper does not guarantee the exact format or content of the actual CUET.
- This paper is intended as a study aid and should not be considered a definitive representation of the official CUET.  *We Learn, We Grow, We Inspire*
- Inspire Forensics hold no responsibility for any variation that may occur within the actual CUET examination.
- The phrase "We learn, we grow, we inspire" is the organization's moto, and represents the drive and purpose of the organization.
